

2 or 3 way pressure compensated flow regulators

L6090... (LC04M-CBL) - L6095... (LC04M-CBD)

RE 18303-04

Edition: 02.2016

Replaces: 07.2012

Size 4

Series 00

Maximum operating pressure 310 bar (4500 psi)

Maximum flow (2-way) 12 l/min (3.2 gpm)

Maximum flow (3-way) 20 l/min (5.3 gpm)

General specifications

2-way or 3-way pressure compensator valve with fixed setting.

Sandwich body with CETOP RP 121 H-4.2-4-P02 interface.

They maintain a constant, pre-established, pressure drop between ports P and A, P and B.

If employed in combination with proportional directional valves, they control the flow and maintain it constant for each spool position, regardless of working pressure.

Cast iron body.

Zinc plated external surfaces.

Functional description

Type L6090... and L6095...

Inside the sandwich type body (1) there is a 2-way or 3-way spring loaded pressure compensator which automatically adjusts its position in order to reach equilibrium and maintain a constant pressure difference between P and A (or P and B) ports. For any given spool position, the compensator modulates the opening until a constant pressure drop and a constant flow rate is established regardless of working pressure. An incorporated shuttle

valve supplies the A or B pressure signal to the “spring side” of the compensator; the compensator is exposed to the inlet (P) pressure on one side and to the outlet (A or B) pressure, plus spring load, on the opposite side. In conclusion, the pressure difference between inlet and outlet is determined by the spring load, which is designed to remain nearly constant as the compensator moves, allowing more or less flow, until the equilibrium position is reached.

Technical data

General		
Valve weight L6090	kg (lbs)	1.13 (2.49)
Valve weight L6095	kg (lbs)	1.10 (2.43)
Mounting position		unrestricted
Ambient Temperature	°C (°F)	-20....+50 (-4....+122) (NBR seals)
Hydraulic		
Maximum pressure	bar (psi)	310 (4500)
Maximum flow	l/min (gpm)	See diagram "Δp" (pressure drop)
Compensation	%	± 5 of regulated
Hydraulic fluid		
General properties: it must have physical lubricating and chemical properties suitable for use in hydraulic systems such as, for example:		Mineral oil based hydraulic fluids HL (DIN 51524 part 1). Mineral oil based hydraulic fluids HLP (DIN 51524 part 2). For use of environmentally acceptable fluids (vegetable or polyglycol base) please consult us.
Fluid Temperature	°C (°F)	-20....+80 (-4....+176) (NBR seals)
Permissible degree of fluid contamination		ISO 4572: β _x ≥ 75 X = 10...12 ISO 4406: class 19/17/14 NAS 1638: class 8
Viscosity range	mm ² /s	5....420

Characteristic curves

L6090 _ _ _ (2 way)

L6095 _ _ _ (3 way)

EXPLANATION OF THE DIAGRAM

known the maximum regulated flow, is possible know the maximum permissible pressure drop in the flow regulator valve (P-A or P-B) for obtain the required flow.

Example

Given: the regulated flow = 7 l/min (1.85 gpm).

Required: the maximum permissible pressure drop.

Select the value 7 on the X line within the diagram above, follow the arrows up to the value in Y line. The value found is the maximum permissible flow regulator valve's pressure drop, impossible obtain the flow request with a pressure drop upper.

Measured with hydraulic fluid ISO-VG32 at 45° ± 5 °C (113° ± 9 °F); ambient temperature 20 °C (68 °F).

Note

Characteristic curves are obtained with Ta and Tb connected by proportional operated directional valves

External dimensions and fittings

- 1 Label
- 2 Mounting holes, only for M5 DIN 912-8.8, tightening torque = 5 ÷ 6 Nm (3.6 ÷ 4.4 ft-lb)
- 3 Same sealing as in A,B,P,T ports.

- 1 Label
- 2 Mounting holes, only for M5 DIN 912-8.8, tightening torque = 5 ÷ 6 Nm (3.6 ÷ 4.4 ft-lb)

- 3 Same sealing as in A, B, P, T ports.
